

# VALVCON® V-SERIES ACTUATOR 115VAC AND 230VAC

## GENERAL

Metso is a leading designer and provider of compact, reliable, electronically controlled electric actuators for valves and dampers. We offer a complete line of *Valvcon* electric actuators for accurate positioning of dampers and valves in the aerospace, automotive, consumer services, discrete manufacturing, energy, environmental, oil/pipeline, petrochemical, power/utilities, process, recreation, transportation, and water/wastewater industries.

Metso has developed and introduced the industry's most innovative electric actuator features, including simple "set and go" calibration, intelligent processor-based digital electronics, "plug-in" accessory boards, back-up power, as well as electric actuators designed for remote control, solar-powered applications and two-wire network applications.

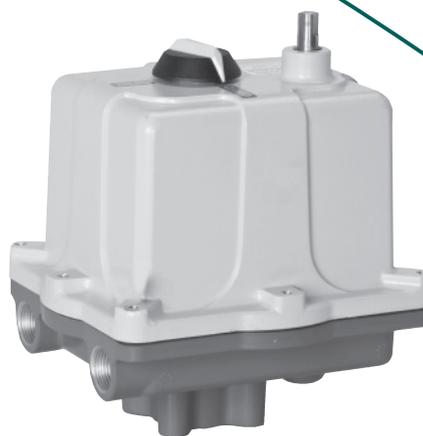

## SPECIFICATIONS

The quarter-turn electric actuator complies with Part 15, Class A of the FCC regulations for emissions and conducted radiation for industrial devices. meets NEMA standards for use in weathertight or weathertight and hazardous locations. The actuator is a single, complete unit composed of a compact cast aluminum housing, motor, gearing, limit switches controlled by metal cams for end of travel control, a mechanical position indicator, and a wrench-operated manual override shaft. Actuator mounting flanges comply with ISO 5211 standards incorporating a female drive for direct output coupling. The actuator is capable of operating in ambient environments of -40° F to 150° F.

## FEATURES AND BENEFITS

### Motor

The motor is capable of running continuously at full torque for up to 15 minutes at ambient temperatures at or below 104 degrees F. Subsequently, the motor is capable of 75% duty cycle. Motors are split phase, capacitor driven with an auto reset thermal sensor, and provide high starting torque and are totally enclosed within the actuator's housing cover.

### Lubrication

All rotating power train components are coated with a multi-purpose grease. Lubricants are suitable for ambient conditions of -40° F to 150° F.

### Gearing

The powertrain is comprised of hardened steel, machine cut spur gears. Non-metallic, aluminum, cast or stamped gearing is not used.

### Manual Operation

A wrench-operated override shaft is provided for manual operation. As an option, a metallic hand wheel may also be provided. The override device is engaged through a declutching mechanism, which separates the final output drive from the motor output.

### Limit Switches

Actuators have two standard end of travel switches, single pole double throw, rated at 11 amps at 250 VAC. The limit switches are activated by metal cams mounted on the actuator drive shaft. At the end of travel, the power is routed through the limit switches to a terminal strip location for pilot or position indication applications. The limit indicator outputs are fuse protected with auto-resetting polyfuses, with a working limit of 0.25 amps, to protect the limit switches and internal circuitry from possible overloads originating outside of the actuator. To simplify maintenance, these polyfuses are permanent and do not need to be replaced. They reset automatically, shortly after the overload condition is corrected - in approximately 3 minutes. Two additional limit switches may be added to the actuator, adjustable to operate at any position, as required by the process application.

**FLOCONX®**  
— USA FLOW CONTROL COMPANY —

**metso**  
Expect results

### Open/Close Operation

Open/Close actuators are controlled via two, powered, maintained contacts, one for driving in the clockwise direction, and one for driving in the counter-clockwise direction. Power may be removed mid-stroke to position the valve. The AC input power is fuse protected on both AC Hot and AC Common. The fuses will never blow in normal operation - they are conservatively rated and soldered in place for high reliability.

### Proportional Control (Modulating Operation)

Modulating control actuator accepts a variable, proportional 4-20mA or 0-10VDC valve position signal and responds by positioning the valve linearly with an accuracy of 1%. Normally, the actuator drives clockwise in response to a decreasing control signal; however, the actuator is capable of "reverse acting" operation (driving counterclockwise in response to a decreasing control signal) with no necessitated internal wiring changes. The actuator also supplies a 4-20mA or 0-10VDC position feedback signal, and provides the ability to adjust the cycle time of the actuator. A slide switch enables the user to set the actuator response to a loss of control signal. Locked rotor, stall protection initiates whenever the actuator is unable to achieve the position commanded by the control signal, and terminates power to the motor in order to prevent damage due to prolonged/repeated stall conditions.

### The V-Series from Metso

With the innovative *Valvcon* V-Series, Metso pioneered the concept of plug-in, modular electronics in valve automation. This concept redefined and simplified the entire valve actuation process-upgrades and modifications can now be done in the field, in a matter of minutes, with no hard wiring, soldering or factory returns.

For years, the V-Series has set the standard for high quality, rugged and reliable electric actuators. Metso uses its proven technology to vastly simplify actuator set-up and calibration and to enhance actuator performance. V-Series electric actuators are designed to offer highly efficient operation in a compact package. Ideally suited for most quarter-turn valves and dampers, they are designed for a wide range of service, from on-off duty, to modulating or proportional control, to two-wire networks.

### Flexible, Reliable Actuation

The Metso reputation for success is also built on the ability to meet the needs of its customers with high quality, reliable, "leading edge" actuator technology, products and services. We strive to anticipate and exceed your application needs. Engineered with a modular approach, *Valvcon* actuation systems allow you to modify or upgrade actuators in the field - giving you the flexibility to actuate new valves or to retrofit existing valves with amazing ease.

### Extended Duty Cycle for Continuous Cycling

Metso conservatively rates its AC motors at 75% duty cycle. Motors can operate continuously at full rated torque for up

to 15 minutes without pausing. After running continuously for 15 minutes, motors need to rest for only 1/3 of the cycle time between each cycle. That is, if the cycle time is 30 seconds, they must rest for 10 seconds between each cycle. In constantly modulating applications, all *Valvcon* V-Series actuators can handle up to 30 starts per minute.

### Breakaway Torque

Designed for efficiency and reliability, all *Valvcon* actuators deliver the power you need when and where it is needed. With efficient gear trains and motors these actuators are rated at breakaway torque. Immediately upon power up, the actuator supplies the rated torque - when it is needed to break the valve away from its seat. Other manufacturer's actuators may be rated at running torque, but actually deliver significantly less breakaway torque.

### Simplified Set-up

The *Valvcon* V-Series Control Board introduces a revolutionary advance in the set-up and calibration of electric actuators — SIMPLICITY!!!

With the Mode Selector and the touch of simple "enter, set and go" push buttons, the V-Series Control Board simplifies actuator set-up. On-board push buttons and slide switches make manual positioning easy, and simplify the selection of input signal type, feedback signal type, and actuator fail position in the event of a loss of control signal. With a simple turn of a dial, signal sensitivity (dead band) and cycle time (speed) are easily adjusted.

### Features at a Glance!

- Electronics are simple to use, with a clearly labeled terminal strip and easy access to user wiring
- Plug-in electronics for simple upgrades and modifications, with coded connectors to make internal mis-wiring impossible
- Standard extended 75% duty cycle at ambient temperatures up to 104 degrees F
- "Captive" cover screws are permanently attached to the cover and simplify installation in awkward locations
- Stall protection stops the motor if excessive torque or stop is encountered, providing protection from stall conditions (modulating applications only)
- Thermal overload cutout protects the motor from damage caused by over duty cycle applications

### Certifications and Standards Compliance

Certification by the Canadian Standards Association of either hazardous or weatherproof locations is standard on all V-Series models.

Enclosure Ingress Protection (IP) Rating: 66

Facility: ISO 9001:2015 certified

Compliance with the following international standards: ISO 5211, EN60079-0:2012 (WX models only), EN60079-1:2007 (WX models only), IEC 60079-0:2011, 6th Ed. and IEC 60079-1:2007, 6th Ed.

## V-SERIES BOARD OPTIONS

### (Order Code C) Control Board

The add-on Control Board allows control from either 4-20mA or 0-10VDC (or 2-10VDC) control signals. This board also provides:

- position feedback (4-20mA or 0-10VDC)
- locked rotor/stall protection
- speed control for slower cycle times
- adjustable dead band (sensitivity to signal changes)
- on-board supervisory control via push buttons
- selectable pre-set response to loss of control signal (fail to zero or fail last position)
- reverse acting operation with no wiring changes required
- split range operation

### (Order Code U) Iso/Readback Board

For 2-wire open/close and 3-wire (jogging) open/stop/close or 3-wire latching control. Isolates control signals and motor circuitry in multiple 2-wire or 3-wire actuator

systems. The control signal does not need to match the input power (i.e. a 115VAC powered actuator can be controlled by a 12VDC control signal). Provides 4-20mA or 0-10VDC position feedback.

### (Order Code J) Speed Control/Timer Board

The Speed Control feature solves the problem of the valve opening too quickly in fluid and steam applications where the resulting "hammer" or "shock" is eliminated. Both cycles, (CW and CCW) can be extended independently anywhere from the normal speed down to 1/200th the normal speed.

The Timer feature provides automatic cycling in On/Off applications where the actuation cycle can be scheduled anywhere from once every minute to once every 24 hours.

The Timer and Speed Control functions can be used together or independently.

## OTHER V-SERIES OPTIONS

### (Order Code H) Tropical Heater/Thermostat

Recommended in all high humidity applications where condensation may accumulate inside the actuator. For 115VAC applications the heater consumes 15 watts, for 230VAC applications the heater consumes 40 watts.

### (Order Codes I1, I2, I3, and I4) ISO 5211 Metric Output

The actuator is equipped with an ISO 5211 compliant mounting configuration.

The standard drive output for 150-600 lb-in models is a 3/4" female square. The standard drive output for 1000-3000 lb-in models is a 1" female square. We offer several female metric drive output options, consult the "How to Order" section for available sizes for a given actuator model.

### (Order Code K) Brake

A brake prevents the actuator from being backdriven. Required for all dampers, butterfly valves, PVC ball valves, and resilient seated valves.

### (Order Code P) Feedback Potentiometer

Provides a 0-1000 ohm (3 wire) variable resistance to indicate actuator output position.

### (Order Code S2) Additional Limit Switches

Up to two additional limit switches may be added for position indication or as dry contacts to operate other devices. Single pole, double throw switches rated for 1/2 HP, 11 amps 250VAC, CSA certified.

### (Order Code T) Heater/Thermostat

Recommended in applications where the temperature may drop below 32°F. For 115VAC applications the heater consumes 15 watts, for 230VAC applications the heater consumes 40 watts.

### (Order Codes Y1, Y2, and Y3) Keyed Output

The actuator is equipped with an ISO 5211 compliant mounting configuration.

The standard drive output for 150-600 lb-in models is a 3/4" female square. The standard drive output for 1000-3000 lb-in models is a 1" female square. We offer several female keyed drive output options, consult the "How to Order" section for available sizes for a given actuator model.

### (Order Code Z) Handwheel

For manual operation when power is not available. The handwheel is disengaged from the geartrain and does not turn during normal operation. When the handwheel is pushed down, it disengages the motor from the geartrain and allows manual operation.

### (VWX and LVWX) Hazardous Location Enclosures

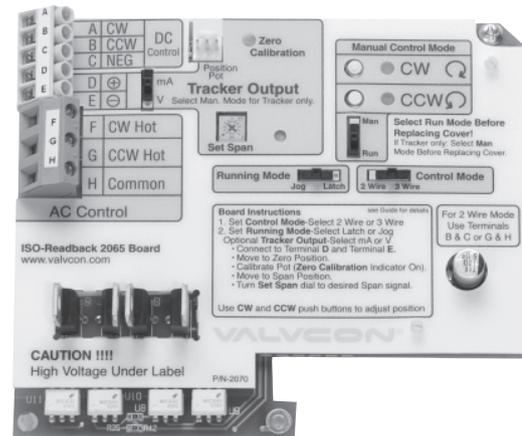

The standard enclosures (VW and LVW) are rated for NEMA 4/4X (weather tight and corrosion resistant). The Hazardous Location enclosures (VWX and LVWX) are Certified by CSA to meet NEMA 4/4X/7 & 9, Class I, Div 1, Groups C&D; Class II, Div. 1, Groups E, F, & G; Class III, and are also certified to ATEX Directive 2014/34/EU, IECEx CSA 14.0057X.

Certificate Number: **Sira 13ATEX1166X**

II 2 G  
Ex d IIB T6 Gb  
Ta = -20°C to +66°C

✓ Input Impedance	Voltage Input: 35K ohms; Current Input: 200 ohms
✓ Control Signal	May be either 4-20mA or 0-10VDC (selectable via on-board slide switch) Fully compatible with ISA-S50.1 as a type 4, class L, power isolated device. Input minus and transmit minus are tied together and isolated from power and earth ground
✓ Position Signal	May be either 4-20mA or 0-10VDC (selectable via on-board slide switch) Minimum resistive load for voltage output: 1K ohm Maximum resistive load for current output: 500K ohm
✓ Locked Rotor Protection	If the actuator cannot achieve the position commanded by the control signal, after 5 seconds it will stop the motor. The actuator will remain paused until the control signal commands it to drive in the opposite direction
✓ Control Fail Position	In the event of a loss of control signal (with power still supplied), user can choose between Zero and Last via slide switch. NOTE: If the minimum control signal = 0VDC, fail position must be set at "Last"
✓ Cycle Rate Speed Control	User can choose 90 degree rotation times of: normal, 2X normal, 3X normal, 5X normal, 10X normal and 20x normal
✓ Dead Band	The amount of change in control signal that the actuator will ignore before the output shaft begins to move. Adjustable from 1% to 3%
✓ Accuracy	1% (dead band settings)
✓ Repeatability	For any given control signal value, the ability of the actuator to drive to the same physical position (i.e, a 12.0 mA signal should result in a 45.0° actuator output position). +/- 1%
✓ Resolution	The smallest amount of actuator response that can be obtained by changing the input signal. +/- 1%
✓ Split Range	Actuator may accept split range (i.e., 4-12mA or 12-20mA) control signal with no wiring changes
✓ Reverse Acting	With no wiring changes required, the actuator may be calibrated to drive clockwise upon increasing control signal, and counter-clockwise upon decreasing control signal
✓ On-Board Supervisory Control	Push buttons override the analog control signal, allowing the user to manually position the valve or damper

### 115VAC AND 230VAC ON/OFF STANDARD

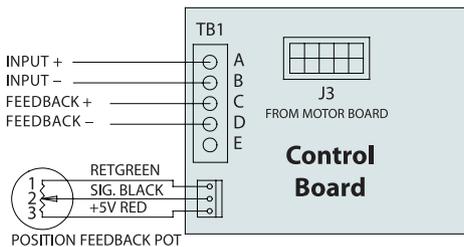

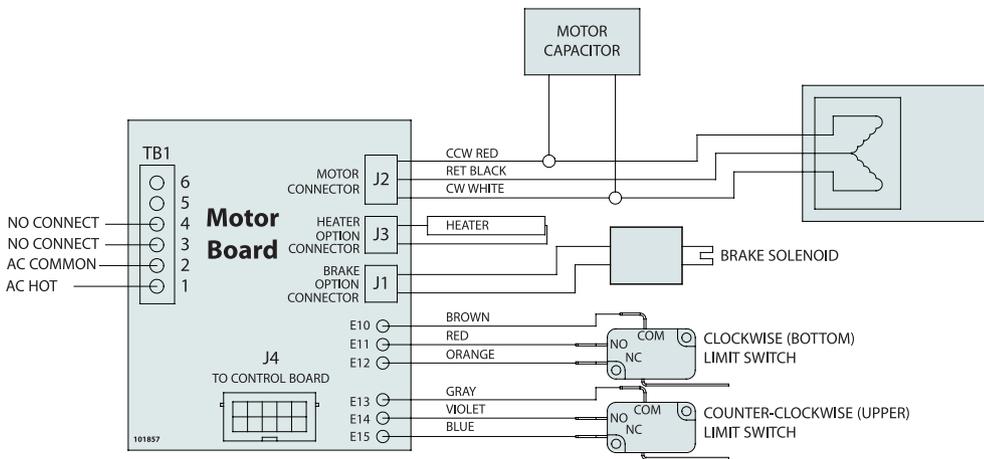

**MOTOR BOARD WIRING**

TERMINAL	6	CW LIMIT	(LINE VOLTAGE OUT)
TERMINAL	5	CCW LIMIT	(LINE VOLTAGE OUT)
TERMINAL	4	CW AC HOT	<b>(MUST CONNECT)</b>
TERMINAL	3	CCW AC HOT	<b>(MUST CONNECT)</b>
TERMINAL	2	AC COMMON	<b>(MUST CONNECT)</b>
TERMINAL	1	AC HOT	(FOR HEATER OPTION)+

**CAUTION:** Valvcon AC voltage actuators use reversing induction motors which cause high voltages. **Devices connected to terminal 3 and to terminal 4 must be rated for a minimum 250VAC (550VAC for 230VAC applications).** Due to the induced feedback voltage, multiple actuators can not be wired in parallel. Separate (isolated contacts) must be provided for each actuator.
